

Henderson Landscaping Services Sustainability & Environmental Commitment

At Henderson Landscaping Services, we believe good gardens should be kind to the environment as well as enjoyable to use. From day one, we have tried to make practical, responsible choices in how we work – from the tools we use to the products we apply and the way we plan jobs.

This document outlines our main sustainability aims and how we are working towards them.

1. Our long-term goals

Operationally carbon-neutral by 2035

Our aim is to reduce and offset the carbon emissions linked to the day-to-day running of the business (travel, tools, waste and energy) so that, by 2035, our operations are effectively carbon-neutral.

Move towards chemical-free maintenance

We want to phase out routine use of synthetic pesticides and weedkillers wherever practical, and focus instead on cultural controls, better plant choices and environmentally responsible treatments.

2. What we are already doing

Electric vehicles and battery tools

We use electric vehicles where possible and continue to shift more of our equipment over to modern battery tools, reducing local air pollution and noise in residential streets.

Renewable electricity

The electricity we use is from renewable sources, with around 25% currently coming from our own solar and battery system.

Minimal use of chemicals

We avoid blanket treatments and only recommend targeted products where they are genuinely needed. Wherever we can, we suggest non-chemical approaches and good cultural practice first.

Responsible waste handling

Green waste is separated and handled through appropriate channels so that as much material as possible is composted or recycled rather than going to landfill.

3. How we plan to improve

Over the coming years we intend to:

Track mileage, fuel and power use more closely so we can accurately measure and reduce emissions.

Further increase the proportion of battery-powered equipment in our set-up.

Review all products used for lawn and plant care and prefer lower-impact, environmentally responsible options where they are effective.

Offer more planting schemes that support wildlife, improve soil health and cope better with local weather extremes.

Share clear information with customers about the pros and cons of different treatment options so they can make informed decisions.

4. Working with our customers

Sustainability is a shared effort. We are always happy to discuss options that:

Reduce the need for frequent chemical treatments,

Improve drainage and soil structure,

Support pollinators and other wildlife, and

Make long-term maintenance easier and lighter on resources.

If you have specific sustainability goals for your garden or commercial space, please tell us when you get in touch so we can reflect that in our recommendations and maintenance plans.

If you would like to know more about our sustainability and environmental approach, or have suggestions for how we could do better, please contact us using the details on our website.
